

USWIN COIN

Manjamkuzhiyil Aswin

"KALA - RISING: My Holographic Universe, Answer to Life".

Introduction

Introducing USWIN 🚀

USWIN stands for "Us Win" — a community-driven token inspired by the idea that success comes from moving forward together. Built on BNB Chain, USWIN follows the long-term vision that made Bitcoin a global phenomenon: open participation, transparency, and community strength.

Our mission is simple: create a positive community where holders can learn, build, and grow together. USWIN is more than a token name — it's a mindset. When the community wins, we all win.

- ♦ Token: USWIN
- ♦ Network: BNB Chain
- ♦ Trading Pair: USWIN/BNB, USWIN/USDT
- ♦ Community-first approach
- ♦ Fair and transparent launch

Contract Address: 0x9ccf31f2031f1f3dbb7ce312f7415ae2d9678b95

Join us as we build the USWIN community from the ground up.

Anatomy of a Candlestick

A single candlestick is composed of four key elements:

Body: Represents the range between the opening and closing price. A green (or white) body shows a bullish session, while a red (or black) body shows a bearish session.

Wick/Shadow: The thin lines extending above and below the body, showing the highest and lowest prices reached during the period.

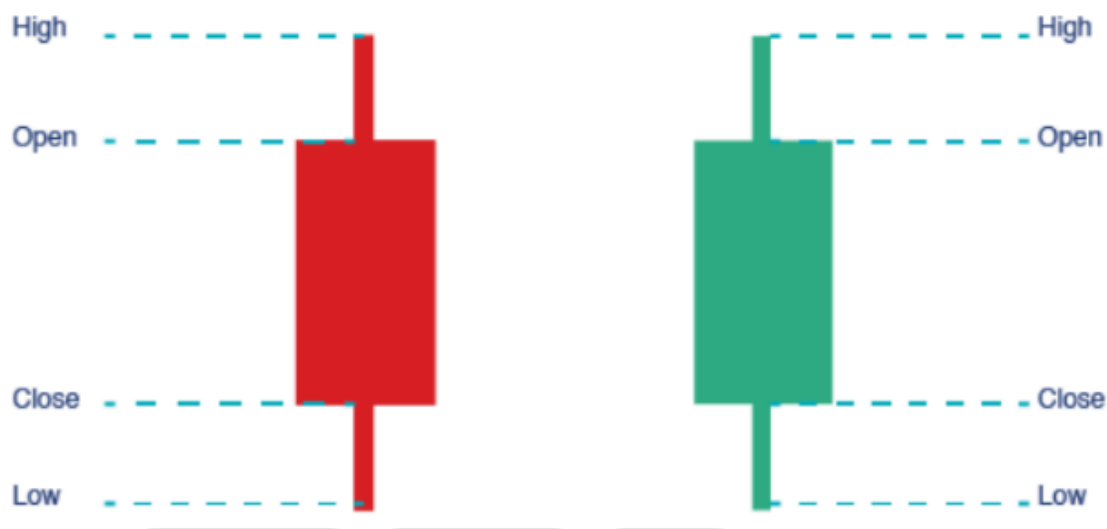

Upper Shadow: Indicates how far buyers managed to push the price before sellers regained control.

Lower Shadow: Reflects the depth of selling pressure before buyers stepped in.

Bullish Candle: Closes higher than it opens, signaling buying strength.

Bearish Candle: Closes lower than it opens, signaling selling pressure.

Anatomy of a Candlestick

To get the most from this guide:

1. **Identify the Trend:** Determine whether the market is trending up, down, or sideways before interpreting any pattern.
2. **Confirm with Context:** Candlestick patterns are strongest when combined with key support/resistance zones or volume analysis.

Pivot Point

The pivot point itself represents a level of highest resistance or support, depending on the overall market condition. If the market is directionless (undecided), prices will often fluctuate greatly around this level until a price breakout develops. Trading above or below the pivot point indicates the overall market sentiment. It is a leading indicator providing advanced signaling of potentially new market highs or lows within a given time frame.

The support and resistance levels calculated from the pivot point and the previous market width may be used as exit points of trades, but are rarely used as entry signals. For example, if the market is up-trending and breaks through the pivot point, the first resistance level is often a good target to close a position, as the probability of resistance and reversal increases greatly.

Support and Resistance

Support and resistance is a concept in technical analysis that the movement of the price of a security will tend to stop and reverse at certain predetermined price levels.

Support

A support level is a price level where the price tends to find support as it is going down. This means the price is more likely to "bounce" off this level rather than break through it. However, once the price has passed this level, by an amount exceeding some noise, it is likely to continue dropping until it finds another support level.

Resistance

A resistance level is the opposite of a support level. It is where the price tends to find resistance as it is going up. This means the price is more likely to "bounce" off this level rather than break through it. However, once the price has passed this level, by an amount exceeding some noise, it is likely that it will continue rising until it finds another resistance level.

Breakout (technical analysis)

A breakout is when prices pass through and stay through an area of support or resistance. On the technical analysis chart a break out occurs when the price of a stock or commodity exits an area pattern.

Market Trend

A market trend is a putative tendency of a financial market to move in a particular direction over time. These trends are classified as secular for long time frames, primary for medium time frames, and secondary lasting short times .- Traders identify market trends using technical

analysis, a framework which characterizes market trends as a predictable price response of the market at levels of price support and price resistance, varying over time.

The terms bull market and bear market describe upward and downward market trends, respectively, and can be used to describe either the market as a whole or specific sectors and securities.

Statues of the two symbolic beasts of finance, the bear and the bull, in front of the Frankfurt Stock Exchange.

Fib retracement drawing tool

From BTCUSDT chart.

Application

The fib retracement tool is not included in your favorites by default, so you can add it by selecting the hollow star next to the tool icon and name. A favorites toolbar will then appear.

Fibonacci retracements are an extremely popular tool in technical analysis. They are created by first drawing a trend line between two extreme points. The vertical distance between those two points is then divided up vertically with horizontal lines placed at key levels at the key Fibonacci ratios of 23.6%, 38.2%, 61.8% and 100%.

The fib retracement tool includes the ability to set 24 different Fibonacci levels (including the 0% and the 100% levels that are defined by the two extremes of the trend line that is originally drawn). Values between 0 and 1 are internal retracement levels. Values greater than 1 are external retracement levels, while values less than 0 are extensions. A checkbox is available for each defined level, which allows that level to be turned on or off for display purposes.

The main use of these levels is that they act as levels of support and/or resistance when price is retracing back from an original advance or decline. These are key levels to take note of when price is correcting or experiencing a counter-trend bounce. The idea is that after an initial move (either a decline or an advance), price will often retrace back towards the direction it came from. The areas or levels defined by the retracement values can give the analyst a better idea about future price movements. Remember that as price moves, levels that were once considered to be resistance can switch to being support levels. The opposite is also true.

Trend-based fib extension drawing tool

Application

Fibonacci extensions is a tool that traders can use to establish profit targets or estimate how far a price may move. Extension levels are also possible areas where the price is expected to reverse.

Extensions are drawn on a chart, marking the price levels of possible importance. These levels are based on Fibonacci ratios.

To draw trend-based fib extension, three points needed. Once the three points are set, the level lines are drawn up to Fibonacci sequence. The first point chosen is the start of a move, the second point is the end of a move, and the third point is the end of the retracement against that move. The extensions then help project where the price could go next.

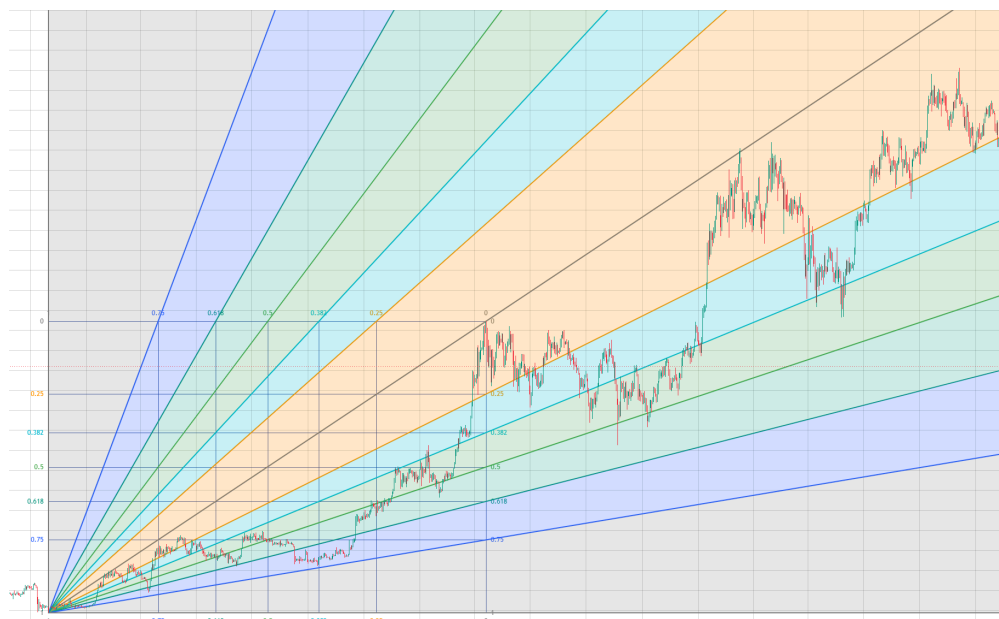

Fib speed resistance fan drawing tool

Application

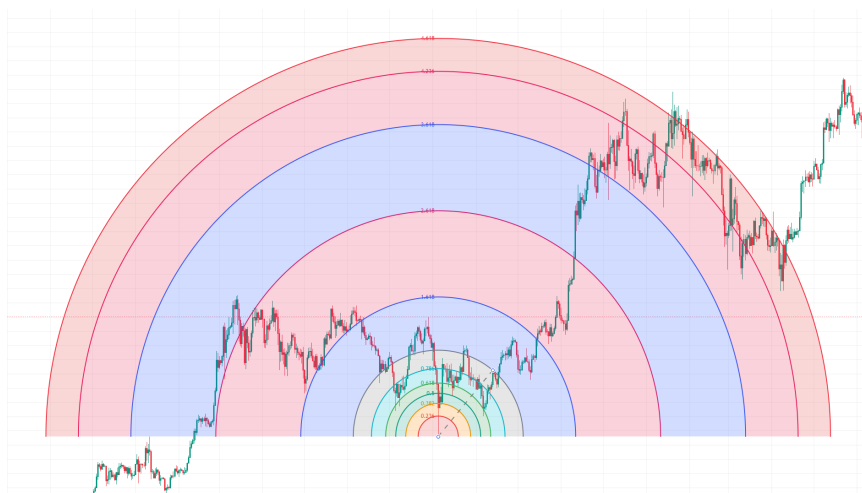

Speed resistance fans are tools used technical analysis to identify support and resistance levels of a trend and the price level a trend correction may rise or fall. A speed resistance fan consists of a trend line on which speed resistance lines are drawn above (which represents time) and below (which represents price). These lines are drawn based on time/price percentages of the

distance between the beginning and the end of the trend line. The most common speed line percentages used by analysts are one-third and two-thirds. Fibonacci ratios are frequently used. Speed lines are a combination of trend line and percentage retracement analysis. Speed resistance lines not only help to measure trend corrections (percentage retracement) but also measure the speed of a trend.

Speed resistance fan lines can also be viewed as support or resistance lines. In an uptrend, price usually stays above the higher speed line. If this line is penetrated, prices generally fall to the lower speed line, which in many cases becomes the support level. However, if prices break below the higher speed line, fall to the lower speed line, and then begin to rise, the lower speed line becomes the resistance level.

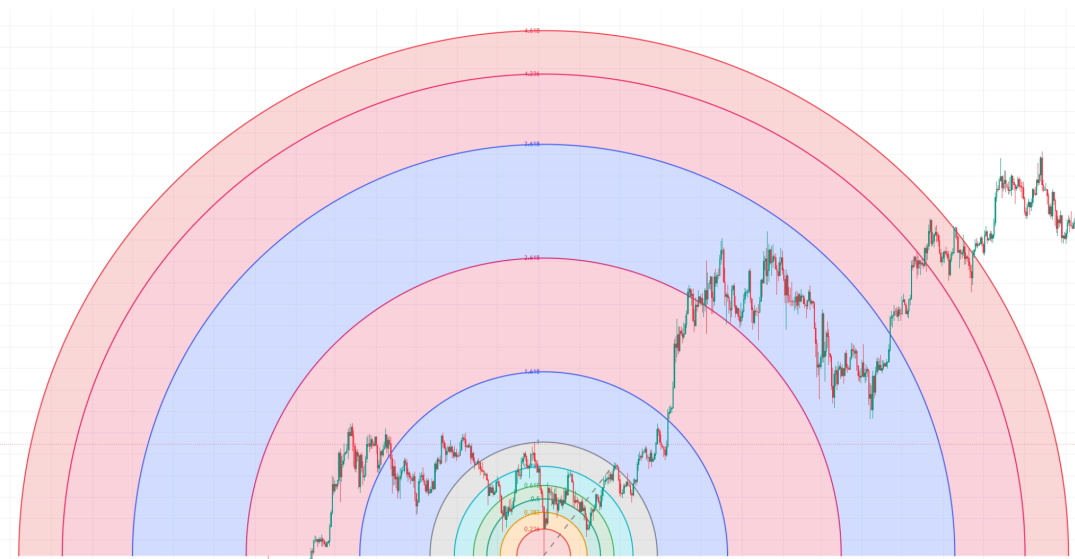

Fib speed resistance arcs drawing tool

Application

Fibonacci speed resistance arcs are used in technical analysis to determine the direction and speed of the trend reversals and also indicate the support/resistance levels. The first step is drawing a trend line between the high and low points of a trend. Then arcs are created and intersect the trend/speed line at the selected distance percentages between the beginning and the end of this trend line.

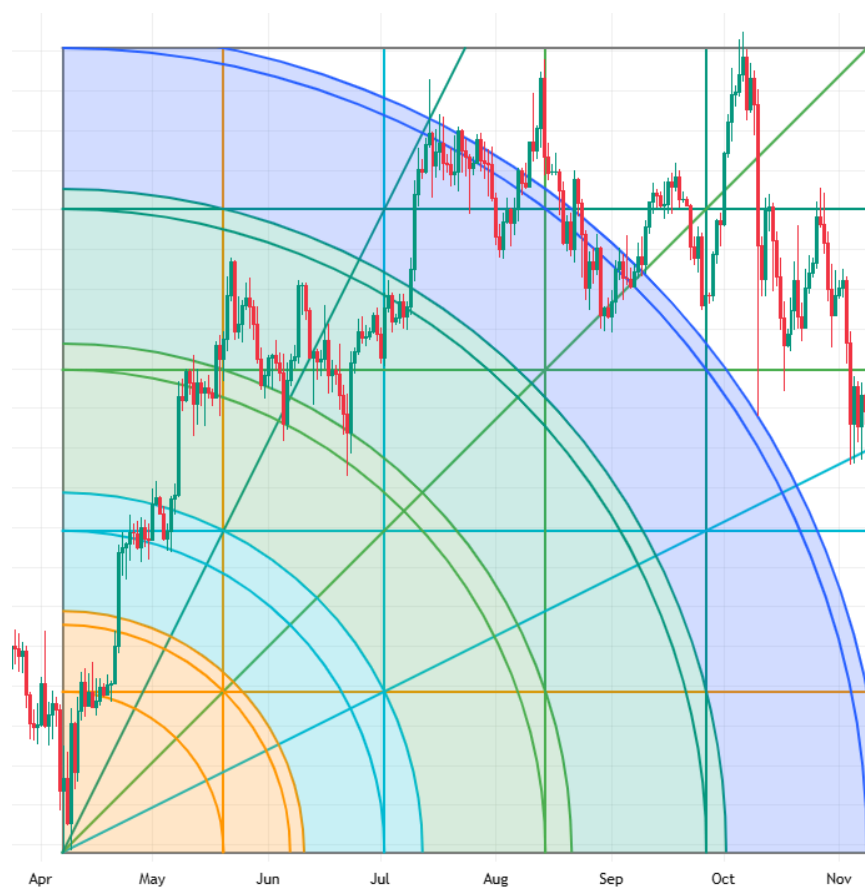

Gann square drawing tool

Application

The Gann square is one of the best known technical analysis tools created by WD Gann along with the Gann fan and Gann box. It is considered a cornerstone of his trading technique that is based on time and price symmetry. The Gann square is an advanced tool and using it properly requires a base level of knowledge about Gann theory and some experience with charting. Please note that the chart needs to be scaled properly to ensure the market has a square relationship. The tool uses the Gann wheel as a basis for its patterns of price and time. It can be used in a variety of ways.

One way is to start at the previous major pivot point (normally the end of the last 5 wave sequence) and draw it so that the 1 X 1 line follows the current market support areas to a good degree. Another way is to highlight geometric formations that can forecast key support and resistance levels by counting forward from the all-time low or all-time high.

When working with Gann's drawings, it is important to use the proper scale ratio, so that a unit of price would correspond a unit of time.

Short position drawing tool

Application

The short position tool allows the user to set an entry point and assume a short position from that point. Extending above and below that price level will be two boxes: green for the profit zone and red for the loss zone. Both zones can be manually adjusted by the user to change the risk/reward ratio.

Long position drawing tool

Application

The long position tool allows the user to set an entry point and assume a long position from that point. Extending above and below that price level will be two boxes: green for the profit zone and red for the loss zone. Both zones can be manually adjusted by the user to change the risk/reward ratio.

Chande Momentum Oscillator (CMO)

Definition

The Chande Momentum Oscillator is a technical momentum indicator and was designed specifically to track the movement and momentum of a security. The oscillator calculates the difference between the sum of both recent gains and recent losses, then dividing the result by the sum of all price movement over the same period (usually defined as 20 periods).

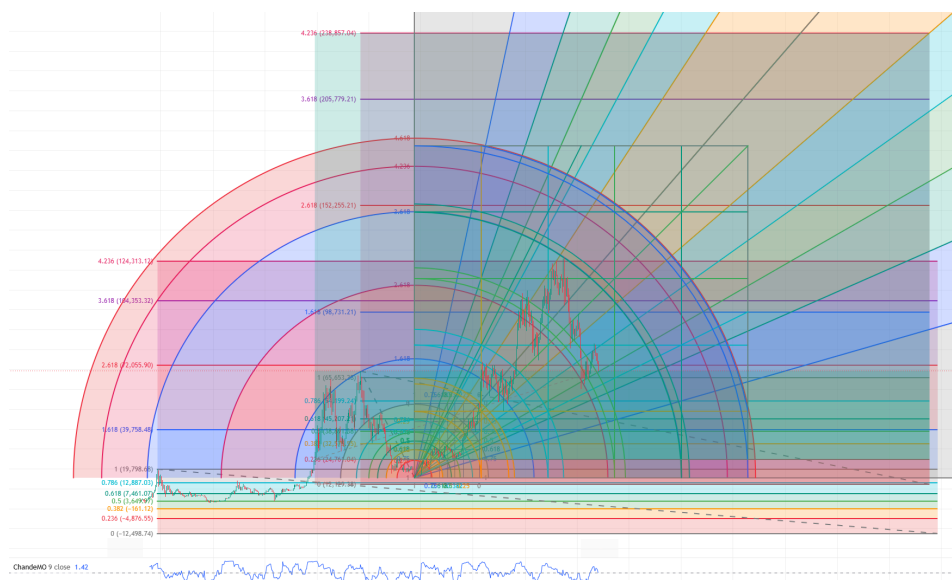

Future Mission

The long-term mission of USWIN is to build a positive and transparent community centered on learning, innovation, wisdom, intuition, and participation in the blockchain ecosystem.

As the project grows, the focus will remain on:

- Expanding the USWIN community through shared wisdom, intuition, and collective growth.
- Increasing awareness of blockchain technology and decentralized finance (DeFi).
- Maintaining transparency in project development and communication.
- Strengthening liquidity and market accessibility through community participation.
- Exploring future utilities and ecosystem opportunities that can add value to the USWIN community.
- Encouraging collaboration among holders, developers, creators, and supporters.

USWIN was created as a learning journey and community project. The vision is to continue improving step by step, adapting to new opportunities, and growing in harmony with the evolving blockchain ecosystem and the world around us.

The success of USWIN will depend on the collective efforts of its community, ongoing development, and responsible growth within the blockchain ecosystem.

"Us Win" is more than a name—it represents the belief that progress becomes stronger when knowledge, wisdom, intuition, and community come together.

Centralized Exchanges (CEX)

Binance

Binance is a global cryptocurrency exchange platform that enables trading of digital assets such as Bitcoin, Ethereum, and other tokens. Founded in 2017, it quickly became one of the world's largest exchanges by trading volume, offering diverse crypto services spanning spot, futures, and decentralized finance.

Bitget

Bitget is a global cryptocurrency exchange and copy-trading platform founded in 2018. It provides spot and derivatives trading services for digital assets and has become one of the world's largest exchanges by futures trading volume. Headquartered in Singapore, Bitget serves millions of users across more than 100 countries.

KuCoin

KuCoin is a global cryptocurrency exchange platform launched in 2017 and headquartered in Mahé, Seychelles. Known as the “People’s Exchange,” it enables users worldwide to buy, sell, and trade a wide range of digital assets. As of 2025, KuCoin serves over 41 million users across more than 200 countries and regions.

Bybit

Bybit is a centralized cryptocurrency exchange operated by Bybit Fintech Limited, headquartered in Dubai in the United Arab Emirates. Founded in 2018, it has grown into one of the world’s largest crypto trading platforms by volume, serving tens of millions of users globally.

OKX

OKX is a global cryptocurrency exchange headquartered in Seychelles, founded in 2017 by Mingxing “Star” Xu under OK Group. It ranks among the world’s largest digital-asset trading platforms, offering spot and derivatives trading alongside a suite of Web3 products, decentralized finance (DeFi) access, and a self-custody wallet.

Coinbase

Coinbase is a U.S.-based cryptocurrency exchange and financial technology company that provides a platform for buying, selling, and storing digital assets. Founded in 2012, it has become one of the world's largest and most regulated crypto trading hubs, serving retail, institutional, and developer clients globally. Coinbase went public on NASDAQ:COIN in 2021 and remains central to mainstream crypto adoption.

Kraken

Kraken is a US-based cryptocurrency and multi-asset exchange operated by Payward Inc. Founded in 2011, it is one of the longest-running digital-asset platforms, offering trading in cryptocurrencies, stocks, ETFs, and derivatives to retail and institutional clients globally. It is known for security, regulatory licensing in multiple jurisdictions, and recent moves to integrate with core US banking infrastructure.

Dextrade

Dextrade is a cryptocurrency exchange platform that facilitates the buying, selling, and trading of digital assets such as Bitcoin, Ethereum, and other tokens. It operates as a global online marketplace for cryptocurrency traders, offering spot trading, staking options, and various digital asset management tools.

Decentralized Exchanges (DEX)

PancakeSwap

PancakeSwap is a decentralized exchange (DEX) and suite of decentralized finance (DeFi) applications built on the BNB Smart Chain (BSC). It enables users to trade BEP-20 tokens, earn rewards through staking and farming, and participate in various on-chain financial and gaming products. Since launching in 2020, it has become one of the most popular DEXs in the BSC ecosystem, recognized for low fees, speed, and a wide user base.

Crypto Wallets

MetaMask

MetaMask is a self-custodial Web3 crypto wallet app developed by Consensys Software Inc. It enables users to store, send, and swap cryptocurrencies and interact with decentralized applications (dApps) across multiple blockchains. Available for iOS and Android, it is one of the most widely used gateways to the decentralized web, supporting millions of users globally.

Trust Wallet

Trust Wallet is a non-custodial mobile cryptocurrency wallet application that enables users to store, manage, and interact with digital assets directly from their devices. It supports a wide range of blockchains and tokens, giving users full control of their private keys and funds. Trust Wallet is widely used for decentralized finance (DeFi) activities and NFT storage.

Main Trading Sections

1. Spot Trading

- You buy and own the actual asset (e.g., BTC, ETH, USWIN).
- Profit if the price rises after you buy.
- No leverage by default.
- Lowest risk among trading products.

Example:

Buy 1 BTC at \$100,000 → Sell at \$110,000 → Profit = \$10,000.

2. Futures Trading

- You trade contracts based on an asset's price rather than owning the asset.
- Can profit from both rising and falling markets.
- Uses leverage (e.g., 5x, 10x, 50x, 100x).
- Much higher risk.

Example:

With 10x leverage, a 10% price move can create roughly a 100% gain or loss on your margin.

3. Margin Trading

- Borrow funds from the exchange to increase position size.
- Similar to leverage but involves borrowing assets.
- Available for both long and short positions on many platforms.

4. Options Trading

- Buy or sell the right (not obligation) to trade an asset at a specific price before a certain date.
- More complex than spot and futures.
- Common among advanced traders and institutions.

5. Copy Trading

- Automatically copy trades from experienced traders.
- Available on platforms like Bybit and Binance.
- Results depend heavily on the trader you follow.

6. P2P (Peer-to-Peer)

- Buy and sell crypto directly with other users.
- Often used for local currency deposits and withdrawals.
- Exchange acts as an escrow service.

7. Convert / Instant Swap

- Simple exchange between assets without using order books.
- Beginner-friendly.
- Usually slightly less favorable pricing than spot trading.

Patterns

Chart Pattern Inverse Head And Shoulders

As with any trade, always look first and then leap. Inverted head and shoulders is a reversal pattern formed by three consecutive lows and two intermediate highs. The first and third lows are called shoulders. They are located approximately at the same level above the second – the head. Also, important is the line drawn along the intermediate highs – the neckline. The pattern is considered completed only when the price, having formed the right shoulder, rises above the neckline. It is expected that further price movement up will be approximately equal to the height of the head.

The head and shoulders pattern

The head and shoulders pattern is a formation which consists of three distinct sections or shapes; a left shoulder, a head, and a right shoulder. There is also a horizontal line which creates the base for the three shapes. The line is known as the neckline. This pattern can be both bullish as well as bearish. The head and shoulders pattern is a reversal pattern. Therefore once price advances either above or below the neckline, it indicates the beginning of a new trend.

Key aspects of the head and shoulders pattern:

Trend: The head and shoulders pattern is a reversal pattern. Therefore the formation should be preceded by a well defined trend. The completion of the pattern will then mark the beginning of a new trend in the opposite direction

Left shoulder: The left shoulder forms at the end of an extensive advance in price. The move generally occurs during a period of high volume. After the move up (peak), price declines to an extent to form a valley

Head: The head is then formed after the valley at the end of the left shoulder formation. From the valley formed at the end of the left shoulder's formation, price then rises once again to a level that is higher than the peak of the left shoulder. This move is accompanied by either normal or high volume. Then, just like the left shoulder, price then reacts and falls again on low volume. The valley should be right around the same level as the previous valley formed at the end of the formation of the left shoulder

Right shoulder: The right shoulder then begins formation after the head and resulting valley. The right shoulder in general is formed on lower volume than both the left shoulder and the head. The key aspect of the right shoulder is that its peak must be lower than the peak of the head

Break: Now that the head and shoulders pattern has been formed, all that's left is price confirmation. If price proceeds to fall below the neckline, this is considered to be confirmation of the bearish setup. In a bullish setup, price breaking above the neckline would be considered confirmation

The USWIN Philosophy

USWIN was created with a simple belief: growth begins with knowledge, wisdom, and action.

The purpose of this project is not only to participate in the blockchain ecosystem, but also to encourage continuous learning and personal development. The educational concepts presented in this document reflect the importance of understanding markets, developing skills, and making informed decisions.

USWIN embraces innovation while recognizing the value of wisdom and intuition. By combining technology, learning, and community participation, we aim to create an environment where individuals can explore opportunities, share knowledge, and grow together.

Every journey begins with a first step. USWIN represents that step forward—a commitment to learning, building, and evolving alongside a community united by a common vision.

The future is shaped by those who are willing to learn, adapt, and contribute. Through positive intention, the USWIN community seeks to create a path of continuous growth and shared success.

Conclusion

USWIN is a symbol of unity, growth, and possibility. What began as a learning journey has evolved into a vision built on wisdom, intuition, innovation, and the collective strength of a community moving forward together.

As the blockchain ecosystem continues to expand, USWIN aims to inspire learning, encourage collaboration, and create opportunities for individuals who share a common belief in progress and positive transformation. Every new connection, idea, and contribution strengthens the foundation of the community and brings new potential for growth.

The spirit of USWIN is rooted in the understanding that success is amplified when knowledge is shared, experiences are exchanged, and people support one another on a common path. By embracing transparency, continuous learning, and collective participation, the community can create lasting value and meaningful achievements.

The journey ahead is filled with opportunity, discovery, and growth. Together we can build, learn, innovate, and create a future guided by wisdom, intuition, and positive action.

USWIN is more than a token—it is a vision, a community, and a reminder that when we move forward together, we all win.

****USWIN — Us Win.****
